

NTZ Micro Filtration

NEWS RELEASE

NTZ LAUNCHES CONTAMINATION MANAGEMENT SERVICES GROUP

Farmington Hills, May 15, 2007 – With over 35 years of fluid management expertise, NTZ Micro Filtration has leveraged these resources into a new contamination management consulting services group. The increasing emphasis and recognition of the effects of fluid contamination in system and product reliability, in conjunction with meeting ISO levels to reduce failures and downtime, has led NTZ into this expansion to meet customer requests. Additional technical staff has been added to support the contracts that have been awarded by new clients including a Fortune 500 heavy equipment manufacturer and a top 50 OEM power train supplier.

“The NTZ philosophy has always included a total system approach to customer solutions. We recognized the need that was growing for plant contamination management support beyond products.” explained, NTZ’s founder Pierre Nieuwland. “Our customers have encouraged our expansion into the consulting services arena based upon their experience with NTZ’s broad contamination expertise and a void of current available services in this field. We have already landed two key accounts from Fortune 500 companies where we have assisted in an immediate and permanent solution to their growing warranty claims.”
