

EP NTZ Micro Filtration

TESTIMONIALS

Customer

New England Transmission

Business

Transmission rebuilder.

The Problem

Contamination in dyno system.

The Solution

EP NTZ bypass filter AL-29 added to dyno system.

TransProtector added to every rebuilt transmission leaving the shop.

The Products

AL 29 Series Bypass Filter
EP NTZ TransProtector

March 2005

Thank you for visiting our shop and introducing micro filtration to us. I could not believe a couple of things –

1. How dirty our dyno system was, even with what we thought were good filtration systems.
2. How well the NTZ filters cleaned them up.

Ever since we added additional fine filtration to our dyno system, we've seen a major reduction of hung governor and sticking shift valve problems. This resulted in more productive dyno tests and has significantly reduced our warranty.

I'm shocked that it's taking the transmission world 30 years to find out what the hydraulics industry has known for so long about dirt. With your help, I've now seen for my own eyes just how dirty our systems are and there really isn't a way to improve it without filters.

Since I've been incorporating the TransProtector in all of our rebuilt units I've been happy with how well customers receive these units as "added protection." So far, no one has turned us down after we recommend it

I offer long warranty and I track it very closely in my shop. I am happy to participate with you in a study of analyzing my warranty comebacks – with and without the TransProtector filter, and I fully expect **to save some money and reduce dissatisfied customers**. Many of us are under pressure to offer longer warranty periods to remain competitive in today's market. Adding the TransProtector filter is something that makes me feel a lot better about it.

Best Regards,
Keith Loura
Manager
New England Transmission
South Portland, ME

EP NTZ offers the TransProtector in three different sizes (5/16", 3/8", and 1/2") with installation kits that include the filter and everything needed to install one for rubber or steel lines, installation hardware, instructions, a pan sticker, and a contamination-free flow test container. The container serves as an effective measuring device to confirm proper cooler flow after a rebuilt transmission is installed.

EP NTZ Micro Filtration, LLC

The smart choice.
